Combined Transport Selects DriverTech™ for On-Board Computing and Scanning for Fleet Operations

Salt Lake City, Utah, August 1, 2006 (BUSINESS WIRE) - DriverTech, a leading manufacturer of on-board computers for the trucking industry and Combined Transport, Inc., a specialized heavy hauling trucking company based in Oregon, announced today the fleet wide rollout of DriverTech's DT4000 TruckPC with Tri-Mode Communications. In making the announcement, Michael Card, president of Combined Transport said, "DriverTech presented us with a solution to a very difficult problem we were having with our permit loads. They delivered what they promised and now we have a great system that has saved us a lot of headaches and improved our operations considerably."

Combined Transportation's heavy hauling services provide transport for oversized equipment and structures using multi-axle trailers and removable goosenecks for high, wide, and heavy freight. The vast majority of these loads require permits. "The DriverTech system allows a driver to send and receive permits anywhere," said Card. "Prior to DriverTech this process involved fax machines, frequent stops, and a lot of mistakes."

"We're finding that scanning is an extremely valuable piece of the DriverTech solution," said Mark Haslam, DriverTech's president and CEO, "By allowing carriers to tether off-the-shelf USB scanners to the DT4000, our adopters are dramatically increasing productivity in their fleets." The DriverTech DT4000 TruckPC, based on Windows® XPe, is capable of supporting a wide variety of USB devices including, scanners, printers, and Voice over IP telephones.

About Combined Transport

Based in Central Point, Oregon, Combined Transport, Inc. is a family owned and operated carrier providing a matrix of flatbed, heavy haul, and specialized transportation services. Combined Transport, Inc. proudly employs the most efficient, state of the art equipment available to our industry. Our specialty lowboys, step-decks and flatbeds move crated and uncrated glass and accommodate partial truckloads of general commodities throughout the 48 states and Canada. We are committed to the operation of a high performance fleet complete with onboard computer

systems to provide the assurance of timeliness and cost effectiveness. For more information please visit www.combinedtransport.com.
